

# HOW DO WE PRESERVE OUR HABITAT?

## GMOs ARE ONE TOOL THAT CAN IMPROVE

crop yields by allowing fewer acres to produce the same amount of food. This can help save critical animal and plant ecosystems including

FORESTS

PARKS

PASTURES

# 12%

In 2014, GMO crops helped preserve the equivalent of 12% of the arable land in the United States<sup>1</sup>.

That's nearly two thirds of all the land in America's national parks!

## IMPROVED ECOLOGY THROUGH GMOs

### DECREASES INSECTICIDE USE

Bt crops are designed to allow important, beneficial bugs to thrive, including:

BEES

BUTTERFLIES

EARTHWORMS

LADYBUGS

SINCE 1996, GM INSECT-RESISTANT CROPS HAVE LED TO A REDUCTION OF INSECTICIDE USE, INCLUDING<sup>2</sup>:

**549.1 MM lbs**  
on cotton crops

**175.7 MM lbs**  
on maize crops
