

GMOs Improve

Healthy soil is fundamental for
CROP GROWTH
& **FOOD**
PRODUCTION.¹

Over the last
20 YEARS,
GMOs
HAVE:

↓ **37%**
REDUCED PESTICIDE
APPLICATIONS

&

Herbicide-tolerant GM crops enable farmers to till – or turn over and break up the soil – less often. This has **increased nutrient-rich organic matter up to 1,800 pounds per acre per year.**³

LESS TILLING⁴ =

In the last 150 years, half of the planet's topsoil has been lost, largely as the result of erosion. Erosion clogs streams and rivers, hurting fish and other species, and can worsen flooding.⁵

GMOs are part of sustainable farming that preserves topsoil, preventing erosion and desertification.⁶

↓ **50% Less**

**LESS EROSION AND
HEALTHIER SOIL,
THANKS
TO GMOs.**
